

Save Power

Tips for reducing the electricity bill.

Turn off the aircon if no one is inside the room.

If you use aircon, close the windows and the doors to keep the cool air inside the room.

Aircon is expensive to run, use a fan when you can

If you have an electric hot water heater, turn it off if you don't use it.

Just turn it on 15 minutes before you want to take a nice warm shower. This will save a lot of electricity.

Switch fans and lights off if no one is using them.

Shut fridge and freezer doors properly.

This is to keep the cold air in the fridge and keep your food fresh, safe to eat.

Turn of the TV, computer, and other appliances from the main switch.

If you turn it off from the remote, it still uses a bit of electricity. So if you want to save money, turn it off from the wall.

Extra tips: If you have a pre-paid power meter, check your power credit before you go shopping so you can buy more power while you're out shopping.

It can be costly to take a taxi just to buy a power card, especially at night.

Don't lose your power card. It costs money to replace one. Always put it in the same place, so you won't misplace it.
